Young-Iob Chung : South Korea in the Fast Lane: Economic Development and Capital Formation before purchasing it in order to gage whether or not it would be worth my time, and all praised South Korea in the Fast Lane: Economic Development and Capital Formation:

After having been a Japanese colony for more than 35 years until 1945, the miraculous economic development in the southern half of the Korean peninsula has multiplied the nation's output nearly 38 times and expanded per capita income by 16 times from \$778 to \$12,422 (in year 2000 prices) and transformed from basically an agrarian economy to that of a major industrial power, which is now considered one of a dozen or so of most industrialized countries in the world, during the 43-year period between 1953 and 1996. This book is a study of development of the South Korean economy from the time of the cessation of the Korean War to date, based on available data with minimal historical description, focusing on investment, the sources and means of capital formation, which is one of the most critical factors that contributed to economic development, and the government role of in them for economic growth and structural changes. The approach in this study is more analytical (without being mathematical, statistical, or technical, but with supporting quantitative data) than historical. There are a number of studies on some aspects of capital formation and economic development in short articles, but there is no comprehensive study/analysis/book of capital formation and economic development of South Korea since the Korean War, other than this authors comprehensive study of capital formation and economic transformation of Korea before 1945 (1876-1945). Not only this book fills the void of study of the subject after the Korean War but it also complement my first volume. This study reveals a number of significant, though perhaps not all unique, patterns and characteristics of capital formation and economic development of South Korea. The combination of circumstances, approaches, and experiences in the country was in many respects unique in comparison to many developing and developed countries, including many Asian countries, such as Japan and China.

"This book, as a sequel to *Korea Under Siege*, is unrivalled as a single, comprehensive exposition of South Korea's phenomenal economic success after the Korean War. It provides a coherent blend of historical details and analytical rigor that makes complexities embedded in South Korea's process of capital formation and its phenomenal economic growth authoritatively comprehensible. This is an indispensable read for students and scholars interested in South Korea's development."--Kwan S. Kim, Professor of Economics and Policy Studies, University of Notre Dame

About the Author Young-Iob Chung was born in Korea. After briefly attending Seoul National University, he completed a BBA degree at the University of California at Los Angeles and received MA and PhD degrees in economics from Columbia University. He taught at Moravian College in Pennsylvania and was associate professor and professor of economics at Eastern Michigan University from 1966 to 1998. Chung also served as department head (1970-1994) and is now emeritus professor of economics. Among numerous publications, his most recent book is *Korea Under Siege, 1876-1945: Capital Formation and Economic Transformation* (OUP, 2006).
